The main difference between Adobe Illustrator and Design is that the Illustrator is a vector design program while InDesign is used for desktop publishing.

[Read More Answers.](#)

Question # 20

Tell me what Are The Most Important Tools In Adobe Illustrator And Their Uses?

Answer:-

Most important tools in Adobe Illustrator are as follows:

- * Selection Tool: It is used to select entire objects or groups.
- * Pen Tool: We can draw a path or shape with the help of this tool. It will make a straight line or a curved line and it will create two anchor points.
- * Shapes Tool: It is used to make shapes of a rectangle, circle, ellipse, triangle, polygon, and star. We can also draw an exact value of these shapes by clicking the mouse.
- * Line Segment Tool: It is used to draw a perfectly straight line in any direction, we drag the mouse. We can also draw an exact value of line by clicking the mouse.
- * Type Tool: It is a very important tool. We can insert text in different ways like individually, vertically or with the path into our designs.
- * Gradient tool: It is used to apply, create, modify and multiple colors gradients. This tool gives colourful shading effect to our designs.
- * Blend Tool: This tool is extremely useful since it can be joined to create repeating shape patterns, color palettes or, as the name implies, color blends between two or multiple objects.
- * It can be found under the Object > Blend submenu, and select (Blend Options) and trigger it (Make or Alt-Control-B) to create whatever you are trying to achieve.
- * This tool is precise since it can control how many steps (colors or repeating objects) it makes.

Question # 21

Tell me what Do You See As The Three Key Advantages Of Illustrator Over, Say, Corel, Xara Or Newcomers Such As Artboard?

Answer:-

Illustrator's integration and strong workflows with other Adobe products

Illustrator's ubiquity in the creative world

Illustrator's flexibility. While Illustrator's feature set more than meets the needs of the majority of our customers, thanks to independent plugin developers, like yourselves, the application can be expanded for a wide range of customers with specialized needs.

[Read More Answers.](#)

Question # 22

Please explain what is Adobe Illustrator?

Answer:-

Adobe Illustrator is an advanced vector-based graphic design software which is generally used for making vector based designs like logos, illustrations, infographics, stationery, cartoons, and all type of typesetting work.

It was first developed by Apple Macintosh in January 1987. This program is used by both artists and graphic designers to create vector illustrations and designs. Illustrator can support SVG (Scalable Vector Graphics), EPS (Encapsulated-Postscript), PDF (Portable-Document-Format), VML (Vector Markup Language File), WMF (Windows Metafile) files etc. This software will also give us a better print output because it is not resolution dependent.

[Read More Answers.](#)

Question # 23

Please explain is Adobe Illustrator a raster based or vector based software?

Answer:-

Adobe Illustrator is a vector based software. Vector images are made up of thin lines and curves, we know as paths. It uses mathematical formulas, allowing them to be clean & clear scaled and rescaled, it does not lose any image quality. The edges of each object or shape are stay smooth, clean and clear, this feature makes ideal for companies logo, brochures, infographics, portraits, stationery, and packaging.

While raster images are made up of tiny squares called pixels, which can be easily seen by zooming the image. Raster images are known as bitmap images.

[Read More Answers.](#)

Question # 24

What Is Scope And Uses Of Adobe Illustrator?

Answer:-

Adobe Illustrator is an advanced basic graphic vector software which is generally used for making vector based designs like Logos, illustrations, infographics, portraits, cartoon, brochures, packaging, and stationery. This program is used by both artists and graphic designers to create vector illustrations and designs.

There is a lot of scope of Adobe Illustrator because it is one of the greatest vector graphics designing applications in the industry. We can do many things with the help of Illustrator. It uses mathematical formulas, allowing them to be scaled clearly and rescaled, it does not lose any image quality, which makes this feature ideal for companies. New features have made this software more demanding day by day for the designing Industries.

Question # 44

Tell me How Can We Create A Clipping Mask?

Answer:-

Clipping mask is one of the most important tools in Adobe Illustrator. It works very beautifully in designs. It is a great option to insert an image in the path, object or shapes. Find below some easy steps to learn clipping mask:

* First, we make a path with the help of pen tool or make shapes with Rectangle Tool. Then we place our image on it, and selected image will be sent back to the object or a path.
* Now we select both (image and object) by pressing the Shift key and press Ctrl+7 to make the clipping mask.

[Read More Answers.](#)

Question # 45

How Do I Create A Realistic-looking Flare?

Answer:-

Because Illustrator's Flare tool simulates the reflection of a camera lens, you can use the Flare to create cool effects, such as the reflection in an eye. Photographers tend to like the actual reflection only if it enhances the photo, such as the perfect sparkle on the hood of a car. Illustrator gives you the power to put that reflection exactly where you want it.

To add a flare to an eye:

Zoom in to the area to which you want to add a reflection or flare. In Figure 1, the painterly cat's eye is dull and black.

Using the Flare tool (found in the Toolbox housed with the Rectangle tool), click and drag out a flare in the area you want to see the reflection. If you like what you see by using the default settings, then you are finished.

[Read More Answers.](#)

Question # 50

What You Understand By Layer And Group? Please Explain Difference Between Both?

Answer:-

Layer: When creating multiple artworks, it's a task to keep track of all the items in your document window. Small items get unseen under larger items, and selecting artwork becomes problematic. Layers offer a way to arrange all the items that make up your artwork. Layers work as folders that contain artwork. If you reorganize the folders, you change the stacking order of the items in your artwork. You can interchange items between folders and create subfolders within folders.

By default, all items are organized in a single, parent layer. However, you can create new layers and move items into them, or move elements from one layer to another anytime. The Layers panel provides an easy way to select, hide, lock, and change the appearance features of artwork.

Group: You can combine numerous objects into a group so that the objects are treated as a single unit. One move or transform a number of objects without affecting their attributes or relative positions. For example, a grouping of the objects in a logo design can be done with a motive so that we can move and scale the logo as one unit.

Grouped objects are arranged in a sequence on the same layer of the artwork and behind the front most object in the group; therefore, the grouping may modify the layering of objects and their stacking order on a given layer. If you select objects in different layers and then group them, the objects are grouped in the layer of the topmost selected object.

The layer is like a single paper of sheet, you can do anything that you want to make.

The group is a collection of two or many layers together.
