Actuate Job Interview Preparation Guide.

Question # 1

How do we have left-right flow, normally its top-down flow?

Answer:-

It is for right to left. Reverse logic has to implement for left to right

First Define one global variable(g_rw_wdth) as double, Static, public.

And now assume that in a frame you have got two dynamic text.

Now in 1st text box onRow method write following code:

```
g_rw_wdth = 0  
IF ISNULL(row.getvalue("field1")) then  
    g_rw_wdth = g_rw_wdth + (me.size.width/1440)  
end if
```

Now in 2nd text box onRow method write following code:

```
IF ISNULL(row.getvalue("field2")) then  
    g_rw_wdth = g_rw_wdth + (me.size.width/1440)  
else  
    Me.Position.X = Me.Position.X - (g_rw_wdth * OneInch)  
end if
```

In these fashion you can have more dynamic text.

Now if 1st text box the value is null automatically the 2nd text box will shift to place 1st text box.

And so on.

Question # 2

We had a number of reports scheduled to run at various times. This worked fine for at least a year, now it is the second time round we lost all the scheduled jobs, with no apparent reason we can find. Any ideas?

Answer:-

You have lost all Scheduled jobs list because you had cleared all history from completed reports section from management console,

So pls remember before deleting history from completed section remove the check mark of SCHEDULES and then clear history.

Since you can't recover scheduled jobs So next time whenever you Schedule the job copy the location and job name and save it to Excel or text file.

Question # 4

How to implement the parallel report?

Answer:-

This is quite simple to implement.

If you have the example which are there in the actuate install folder you can get help from it.

For developing this what you can do is put a parallel section first and then drag those 2 reports on it, then design those report and in the page layout use two flows and in the report properties assign the flows to the respective reports.
this way you can design it

Question # 7

What is the filter?

Answer:-

there two types of filters

1. single input filter
2. multiple input filter

connecting the report for 2 databases we use multiple input filter.

for example your report need two database for getting data u have to use multiple input filter.

base class for this filter is

AC single inputfilter

AC multiple input filter

i will give example for in your database u have abc,xyz two databases you need data from these two databases so u have use multiple filter. normally single input filter we do not use.

Question # 11

What is the difference between
-using Group by in the SQL of the report
-having a Group section in the report?

Answer:-

An Actuate Group Section will group similar records together by a key field. A query pulling all the records from a table with 100 records and grouping by State or Province will still display 100 records on the report. No data is lost or aggregated.

A SQL Group By will aggregate data being pulled from a table. Grouping By State or Province will result in somewhere less than 100 records being delivered to the report. The results most likely will be 5 records containing a count and the state name: DL-20; MH-10; BR-5, WB-25, and MP-40. A Group By processes the data and creates new information about that original data.

Question # 15

What is AFC? Where we Use AFC in Actuate?

Answer:-

AFC Actuate foundation class designed to hold an ordered collection of objects.

All the commonly used components in the AFC library have been extended in to the sssiebel library.

Sssiebel.rol known as the Siebel library. It is derived from afc.rol and contains all the base classes for the sscustom library.

The use of a component from the AFC library, rather than the sscustom library, is an exceptional situation and applies only to detail charts.

AFC components should not be used directly in Siebel reports except in this specific situation.
