BPM Job Interview Preparation Guide.

Question # 1

What is the main difference between iProcess Server Objects and iProcess Objects server?

Answer:-

Client applications make use of the objects in the TIBCO iProcess Server Objects by making method calls that either retrieve or modify data. These method calls cause messages to be sent to a TIBCO iProcess Objects Server. The TIBCO iProcess Objects Server acts as a gateway between the client applications created with TIBCO iProcess Server Objects, and the TIBCO iProcess Engine, where the actual processing and storage of data occurs. The TIBCO iProcess Engine manages all data, routing work items and updating the appropriate work queues. Server Objects communicate with the TIBCO iProcess Objects Server via TCP/IP. Objects Server communicate with the TIBCO iProcess Engine via UDP

Question # 2

Explain What is short lock and long lock in tibco iProcess?

Answer:-

* Short lock. This is the standard lock normally set by the TIBCO iProcess Workspace. A short lock is removed when a user keeps or releases a work item. In the event that short locks are left behind because, for example, the iProcess Workspace crashed, the only way to remove the short lock is to re-start the iProcess Engine or use the following command.

* Long lock. A lock that is persistent and can only be removed using `sal_llock_frm_init()` by the user holding the lock. Long locks are not normally used by TIBCO iProcess Workspace, but may be set by SAL SDK programs or the TIBCO iProcess Objects Client. Re-starting the iProcess Engine has no effect on long locks, so a work item locked in this way remains inaccessible to every iProcess user until it is manually unlocked.

Question # 3

Tell me Where can we see the description of the error when a Case is terminated abnormally?

Answer:-

Check the `SWDIRlogssw_warn` or `sw_error` log files to see if any error messages were logged.

Question # 4

Explain What is Business Process Management (BPM)?

Answer:-

BPM is an automation of processes that exists in an organisation. There are challenges that can be more efficiently handled through different technologies using BPM. Ex: webMethods technology (using Designer).

Through BPM an organisation can

- > Monitor its working efficiency in rendering services to the customers.
- > Identify the areas that needs to be modified/improvise.
- > easily address the problem areas.
