Question # 2

Can you explain What does aldb_server do?

Answer:-

The albd server handles a variety of tasks.
when a client program wants access a service (avob or view server for example) on clearcase host, it uses a remote procedure call to send a request to the albd server on that host. the albd server starts the requested services if it is not already started. then issues a response telling the client the service's port number. thereafter the client communicates directly with the specific service, without involving the albd_server.
responding to requests for registry information on rational clearcase registry on server host.
responding to requests for licenses information on a rational clearcase license server host.
