### Question # 4

How to Handle Events with DHTML?

**Answer:-**

Event is use to trigger actions in the browser. When client click on the element, associated action will started.Like: an JavaScript will started when client click on element.

Using Event Handler we can do like that,When an event occur it will execute code associated with that element.

Example:

In this example header will changes when client clicks.

```
<h1 onclick="this.innerHTML='abc!'">Click on this text</h1>
```

We can add a script in the head section and then we call the function from the event handler.

Example:

```
<html>
<head>
<script type="text/javascript">
function changetext(id)
{
id.innerHTML="abc!";
}
</script>
</head>
<body>
<h1 onclick="changetext(this)">Click on this text</h1>
</body>
```

</html>
