Question # 4

What is the difference between data integrity and data validity?

Answer:-

Usually data entry personnel - who enter, for example, 13/25/2010, by mistake, while errors in data integrity are caused by bugs in computer programs that, for example, cause data. Therefore, testing should be performed on a regular basis because data changes over time. Data Validity Errors caused due to incorrect data entry, called data validity errors, are probably the most
