EAI SeeBeyond Job Interview Preparation Guide.

Question # 1

What is the difference between ICAN and Jcaps?

Answer:-

- 1.Sun java Application server is included in eGate Integrator
- 2.Sun java system JMS server is included in eGate Integrator some log files now using the Java API rather than using the log4j API .
- 3.Separate UDDI installer and server .
- 4.Enterprise manager is now independent from the repository.
- 5.Deploy the EAR file to a running domain by using Enterprise Designer, Enterprise Manager, or a command-line tool.
- 6.Each domain contains an integration server and a message server.
- 7.Some log files now use the Java Logging API, rather than the log4j API.

Question # 3

Explain the concept of Webservices. What are all the different types of tool that you have worked apart from eGate?

Answer:-

Using WSDL you can enable a BP as a webservice and publish it to UDDI registry. The WSDL is WebServicesDefinitionLanguage document describes a web service using these major elements.

Element Defines
=====

<portType> The operations performed by the webservice

<message> The messages used by the web service

<types> The data types used by the web service

<binding> The communication protocols used by the web service

[Read More Answers.](#)

Question # 4

What is the format of WSDL file?

Answer:-

Types are a container for data type definitions using some type system
Message are an abstract, typed definition of the data being communicated

Operation "€" an abstract description of an action supported by the service
Port Type "€" an abstract set of operations supported by one or more endpoints
Binding "€" a concrete protocol and data format specification for a particular port type
Port "€" a single endpoint defined as a combination of a binding and a network address
Service "€" a collection of related endpoints

Question # 5

What is marshaling and serialization?

Answer:-

Marshalling is like serialization, except marshalling also records codebases. Marshalling is different from serialization in that marshalling treats remote objects specially. (

To "serialize" an object means to convert its state into a byte stream in such a way that the byte stream can be converted back into a copy of the object.

Question # 6

What is queue and what is topic?

Answer:-

There are two types of JMS Messaging systems. They are

1. Point to Point Messaging
2. Publish Subscribe Messaging

Queue: A queue is a temporary storage of a message used when working with Point 2 Point Messaging

Topic: A topic is also a temporary storage of a message used when working with Publish Subscribe Messaging
In Queues, they are connected directly to another queue to transfer the messages.

In Topics, the subscribers need to subscribe to the topics to pick up the messages published by the publishers.

Question # 7

If there are 10 different files with same format. How many ways required to process this file from source side?

Answer:-

It required only one since it read from source side only. It is not necessary to output as a file.

So if you have same 10 files with format .txt file.

use your way to read "*.txt" to read all of them.

Question # 8

what is the difference between file way and batch way?

What is meant by built and deploy?

How to create webservice in seebeyond?

What is webservices?

Answer:-

Built will make a EAR file of your integration

Deploy will deploy your integration on given integration server.

There are three ways of deploying a integration:

1. through command line
2. through enterprise designer
3. through asadmin console

Question # 9

What is correlation ID? and what is Transaction?

Answer:-

In a multilayered implementation, the correlation id helps in relating the transaction in various layers. Each layer may have its own unique transaction id but all will have one common Correlation id so as to be able to track a transaction end to end.

Question # 12

How to check whether particulare components is up and running fine or not in SRE and JCAPS?

Answer:-

We can view both SRE and JCAPS components under the one eManager like http://localhost:15000

You can open your eManager if [URL](#)

You see the left pane of the Explorer and click the first

component like [View available systems](#)

And click that it will show "SRE registry" and you can add

that registry depend on UN, PWD, host name and port number.

Once finish added SRE registry, you must save them and refresh it.

Now you are able to see all SRE and JCAPS components under one eManager and also you can able to see up and running fine or not respective components.
