Flexfield Job Interview Preparation Guide.

Question # 1

What is the significance of structure id in key flexfields?

Answer:-

A Key-Flexfield may be associated with single or multiple structures. This is specified when creating a new flexfield. This can be clearly understood when defining a new key flex field. Note that All the fields expect description and Structure column are optional. If you want to enable a multi-structured flex-field you need to associate the corresponding back-end column

Question # 3

Do we need to register Standard DFF's?

Answer:-

Standard DFF's are given by Oracle. We need not register. We can register Custom DFF's

[Read More Answers.](#)

Question # 4

Are the value sets mandatory for DFF segments?

Answer:-

Value sets for the segments in DFF's are not mandatory.

If require you can change as mandatory. In this Dff form on check box as unable/ disable you can using as require.

Question # 8

Is it possible to enable/disable only few fields of any DFF?

Answer:-

Yes, it is possible to enable or disable few fields in DFF by using Check Box

[Read More Answers.](#)

Question # 9

What is the purpose of a flexfield qualifier? Why is it needed when you can have a unique name for a segment?

Answer:-

Flexfield qualifiers are basically used to identify the nature of the segment at the flexfield level. Qualifiers like Balancing, Cost Center, InterEntity, Natural Account etc. indicate the type of segment.

For Ex--> Normally company segment is qualified as Balancing, which will intimate that the debits should balance the credits for a particular account for a specified company. i.e. for a specific GL code combinations.

Hence having unique names to the segments/flexfield has no connection with this as the purpose of the above is totally different.

Question # 10

Can we disable/enable a whole DFF not few Attributes?

Answer:-

Yes this can be done with Custom.pll It has a procedure call Event. In this procedure you can capture events like when-new-form-instance, when-new-item-instance etc. So capture the event on which you want to disable your DFF and use name_in('system.current_form/item') to know the name of your DFF and then using form built-in set_item_property disable that field. Same way we can do enable the DFF.

Question # 17

Which procedure should be used to make the DFF read only at run time?

Answer:-

FND_DESCR_FLEX.UPDATE_DEFINITION()

[Read More Answers.](#)

Question # 18

Can we use other columns (beside attributes) as segments for DFF?

Answer:-

Yes we may, if we register some other columns then we may use them as flexfields. But this is not recommended by Oracle.

[Read More Answers.](#)

Question # 19

What is the difference between key flexfield and Descriptive flexfield?

Answer:-

Key Flexfield is used to describe unique identifiers that will have a better meaning than using number IDs. e.g a part number, a cost centre etc.

Desc Flex is used to just capture extra information.

Key Flexfields have qualifiers whereas Desc Flexfields do not.

Desc Flexfields can have context sensitive segments while Key flexfields cannot.

[Read More Answers.](#)

Question # 20

What are context sensitive segments in descriptive flexfields?

Answer:-

Context Sensitive segments in descriptive FFs are segments which can be made available or not based on the values entered by the Users in a 'Context' field. This helps in building a value based logic for the FF.
