Question # 3

How to restrict a parameter list with parameters?

Answer:-

The Restrict List to Predetermined Values is a checkbox
that indicates whether a value for the parameter must be in
the list of values. For example, if you check Restrict
List to Predetermined Values and the Initial Value does not
match a value in the list of values, an error will be
generated when you accept the Parameter property sheet.
Similarly, if you set a value for the parameter on the
command line or in a command script and it does not match a
value in the list of values, an error will be generated
when the report is run. If you check Restrict List to
Predetermined Values, a list of values will appear in the
runtime parameter form. If you do not check it, a combo
box will appear (i.e., you can enter values as well as
select from the list).

Question # 5

How to create the triggers in the forms?

Answer:-

There are three types of triggers:
Form level
Block level
Item level
If you want to validate the values of an Item, usually use
Item level trigger, such as POST-CHANGE trigger.

Question # 6

How many types of trigger can be used in a table at a time?

Answer:-

We can define a trigger
1. For Each Row
2. For Each Statement
You can have the following triggers defined for the above
two types:
1. BEFORE INSERT
2. BEFORE UPDATE
3. BEFORE DELETE
4. AFTER INSERT
5. AFTER UPDATE
6. AFTER DELETE
So it makes a total of 12.

Question # 7

When to use Place holder columns in Oracle Reports and what is a place holder column?

Answer:-

place holder columns are like global variables in the reports.
Variables declared in the PL/SQL code they cannot be the source of the field. So, if we assign the variables to placeholder columns they can be the source of the field
since they are global variables.

Question # 8

How to call a URL from a menu using Oracle Forms 6i?

Answer:-

With use of the built_in named
Web.Show_Document('https:\www.google.com',_blank);
