Question # 3

Why do doctors prescribe antibiotics for viral infection instead of antiviral drugs?

Answer:-

generally doctors prescribe antibiotics without any test... because most infections may be cured by antibiotics, of course antibiotics are not effective on viral infections... antiviral drugs are narrow in spectrum and have limited efficacy and side effects are more compared to antibiotics, for prevention of further growth they immediately prescribe antibiotics.....

after testing if it is viral infection they will automatically prescribe antiviral drugs.....

Question # 10

Explain difference between sonication and homozinization?

Answer:-

Homogenization is intensive blending of mutually related substances or groups of mutually related substances to form a constant of different insoluble phases (sometimes with addition of surfactants) to obtain a suspension or emulsion. Sonication is the act of applying sound (usually ultrasound) energy to agitate particles in a sample, for various purposes.
