Question # 2

Explain How to convert decimal to binary and its formula?

Answer:-

It's very simple, just divide the decimal number by 2 and note down the remainder (which will be either 1 or 0), then again divide the quotient obtained in the first step and note down the remainder.....repeat the step till you get 0 as quotient and write the remainders in reverse order that means the last step remainder will be the leftmost digit of the binary equivalent of the given decimal number.

Question # 5

What are the differences between malloc() and calloc()?
What are macros? what are its advantages and disadvantages?

Answer:-

Both malloc and calloc are used for allocating memory dynamically. But the difference is, in malloc elements are not initialised and hence hold garbage values whereas in calloc the elements are initialised.
Macros are used for speeding up the process. The disadvantage is they are not having type_check phenomenon.
