Jobs Help Job Interview Preparation Guide.

Question # 1

I am B.E. Electronics with 2 years Exp. as Software Faculty & 1 Years Exp. in Software Development & 1 Year Exp. in Software Testing But that is all in small company . So please guide me where to apply can s/w faculty & developer exp. are counted for testing reply early?

Answer:-

First I would suggest that you make up your mind in terms of what area you want to pursue your career in. Testing or software development or teaching. I am not sure about teaching, but both software development and testing have huge potential going forward. Some companies do and some do not consider teaching experience as relevant experience to their job requirements. However, I think all in all you can always negotiate on what amount of your total experience can be taken as relevant while taking up the job. Don't be too hung up initially on this and if you are ready to work hard, you would be able to more than make up for the shortfall, if any. Bottomline :- Define your focus and then go for it with full steam. Not much is lost yet. If you keep dilly dallying between if you should do this or that, then it could get late. all the best rgds kabir.

Question # 2

I am doing final year B.Sc(Maths). I like to get into Software field(programming). Please advice me regarding what are the companies recruiting B.Sc maths or Any graduate?

Answer:-

Mathematics graduates can work as actuaries especially in insurance companies. But because you prefer programming, you can also go to banks to create their needed programs. Anyway, any professional company that has an IT department can hire you if you know programming and at the same time an expert in math problems.

Question # 3

I am student of MCA (1st year) and I don't have above 60% consistency since 10th in my profile, but I have a very strong hand on c,data structure and operating system. So my ques is that is there companies who doesn't have the criteria of 60% or who select the student on skills?

Answer:-

In industry, what really matters how hard working (i.e. industrious) you are and how well you can get results. Those are only things that matter. Rest are all preparations. For instance, if you have good training on math it is likely that you will be a better programmer (although there are no guarantees). But I do see your concern about not having high grades or scores. But you can make up for this by working harder (yes, very hard) to get First Class (or Distinction) and probably your earlier scores don't matter much to your potential employers. As an example I can quote my own experience in this matter. I didn't have First Class in High School but in College I worked very hard to get Distinction and I continued that tendency in Post Graduate (M Tech) program to get high scores and there good recommendations from my professors which helped me to get into MS in America. So to answer your question, this shouldn't matter at all, though could be some employers who might be picky about this. But most employers do not care that much about earlier academics. How well you can do things currently is what matters. So roll up your sleeves and show what you are capable of.

Question # 4

I am from Dr B.V.RAJU institute of technology, I am having a backlog in my 3-ii semester as I was absent for that exam, will it be any problem for me for my jobs which I apply?

Answer:-

You will certainly be asked to give a valid reason for the backlog. Most of all, major companies will insist only on candidates with a consistent track record and who have an average percentage over 60-70%.

Question # 5

I want to know how and where can I write the aptitude tests conducted by top IT firms such as Infosys, Accenture, CTS, etc. I am in my final year now and my percentage is about 58% till now. My college did not conduct any of these tests from any company?

Answer:-

Your percentage is on the lower side for entering into major MNC companies. But I would suggest you to strengthen your aptitude, technical, communication, presentation skills to get your entry faster. Prepare a good resume and You can get in touch with good consultants who can help you get your entry into job. Also search good job websites which would have openings of major companies displayed in it. All the Best.

Question # 12

Currently I am working as a XML programmer. I have core java concept. I want to get job in application development using java. So how i have to prepare for that?

Answer:-

From your question it seems that you are applying/trying for your first job. In that case, what I would recommend is that you have your fundamentals pretty well under your belt. Have a thorough knowledge of the projects you did in college and be thorough with the computer science fundamentals. Ability to write short programs and demonstrate logical thinking through use of flowcharts would be an advantage. In the interview , do not try to show that you are master of everything, but instead talk about your core strengths and invite any questions in that area. Of course, choose a company that has work in the area which match your core strengths.all the best.rgds.kabir...

Question # 15

I did M.SC(comp). I had worked as lecturer in computer science for 3 years.Now i want to go on software side.But this experience will not consider. What should I do in order to go on software side?

Answer:-

As you said your expereince in teaching side would not be considered if you want to get into development side of software. There are two options for you. You could try in the training side of software where your teaching experience would be considiered.If you want to enter only into development field of software I woul suggest you to improve your technical skills. After this get in touch with good consultants and give you resumes. You would soon get your entry in software field. All the Best.

Question # 16

I had graduated Master of Computer Applications at 2001 with 70%. I scored less than 60% in BSc computer sc, less than 70% in intermediate (+2) and less than 60% in matriculation (10). Later then, I was not successful in getting the job in Software Development for a year. Then I tried to get trained in Networking but was not successful for 6 months. One of my friend got me an opportunity to work in software development (visual basic programmer trainee) but since i felt that the organization did not got me due respect for not issuing joining order & not paying me for than 3 months & also criticisms given by project manager about my performance I felt depressed left the job. Once again i started looking for the job. Later then i got opportunity to work as computer operator for a govt. organization through my fathers friend . Mean while i have learned autocad and got an oppportunity to work as autocad operator at abroad through a friend. At abroad, I worked as AutoCAD operator for a year but i was given job handling manual drawings, office files & equipment maintenance, computer data entry operator, taking xeroxes etc. with own interest, i prepared a report for work progress of the organization in excel using visual basic for application. During i was severely depressed feeling of myself being isolated and departed from my profession. After completion of one year contract, i opted to return back to india. But, Now i am being in no where state. during past 1 and half month while i took training in software testing from a concern. At interviews, they are asking for experience which i am lacking. I had applied for call center exec position for which i am lacking voice accent and excellent communication. What job shall i do ? Can i get back to the software development field ? is it possible?

Answer:-

Since you have some experience in autocad and that means solid modelling, why dont your try to get employed with some leading architechts or construction companies. There is a construction boom currently in India and I believe there are lots of companies that do their drawing and walk-throughs of their proposed plans to show to their clients. Through autocad, you could also try to get a job in the design dept. of automobile or automobile ancillary units(eg. bharat forge, big forging company) in India since this industry is also booming. Additionally, you could take some training on an animation and modelling package like 3D studio max and try for the entertainment industry/advertisement industry/commercials. If you want to get back to core software development, I guess you may need to do an advanced 2/3+ years course from an institute like NIIT, etc and then probably start from begining in your career.all the best and hope this helps.rgdskabir.

Question # 21

I want to know the eligibility criteria to appear in campus interviews in MNC s like TCS, WIPRO, SATYAM, MIND TREE etc?

Answer:-

Here is the thought for your question..

Top MNC 's like Wipro, HCL,TCS conduct Campus interviews in reputed colleges and Universities.

They usually conduct the test for final year students. some of the companies allows third year studs to allow to attend the selection..

The following things they expecting from the students :

students should have 60% marks from 10th onwards.

Excellent communication skills.

no arrear papers in each semester.

Problem solving skills.

Hope this will help you to understanding the selection procedure..

Question # 22

I am computer science engg student in 5th semester. i have around 62% but did not cleared in single attempt but only in single supplementary exam i cleared them. but i have good knowledge on computer related topics. but i have a fear that i shall not get any job. please advise me about my future?

Answer:-

you are in 5th semester only. YOU have one more semster. So try to score more into your project and increase your percentage much more. Dont worry about not clearing in single attempt. If you make your percentage much more ot would compensate that. Also strengthen your aptitude, technical, communication skills and this would give your good career in a easier way.
