Micro Strategy Job Interview Preparation Guide.

Question # 1

Is it possible to see the data in dataset?

Answer:-

Yes

Open Warehouse Catalog from Architect. Select that particular DSN. Then it will display available tables in that DSN. Select the particular table and right click on that, select SHOW SAMPLE DATA. Then it will show sample data in that data set.

Question # 2

What is the difference b/w the public object & schema object?

Answer:-

Difference between schema objects and public objects is schema objects can be created by using architect permission and public objects can be created in desktop and by using schema objects only we can create public objects. Schema object examples are attributes, facts, hierarchies, transformations. Public objects examples are metrics, filters, prompts and so on.

Question # 5

What is Element cache and give me one example?

Answer:-

Element cache: Most recently used lookup table elements that are stored in memory on the intelligence server or MSTR desktop machines. So they can be retrieved more quickly.

Example:

When a user runs a Prompted report containing an attribute element Prompt or a hierarchy prompt, an element is created...

Question # 6

How we can create the Intelligent cubes in Microstrategy?

Answer:-

Intelligent Cubes can be created in microstrategy in public objects folder or in a particular user folder. We can create a report and point the report to a cube or right click in a folder and click on cube option to create a new cube. once the cube is created, choose the report objects (attributes and metrics) which is required and save the cube. once the cube is saved and ran to check without any errors, one can create multiple reports out of a cube. also, you can add new attributes and metrics when ever necessary and those will be readily available when you run the reports next time.

Question # 15

How to do performance tuning on reports?

Answer:-

For performance tuning there some areas where you need to look and work accordingly.
like

- 1) is there sufficient space so that MSTR can create temporary tables.
- 2)proper filtering condition.
- 3)proper joining between required tables.
- 4) VLDB property
- 5)optimization (manual, logical and global)
its better if go go in the same order....

Question # 16

How to use value prompt and drag it on to report editor?

Answer:-

Eg: if you want to display top 5, 10 or 15 ranks.

- 1.Create a value prompt which will prompt the user to enter the value(to display top n rankers)
2. create a filter to calculate rank and in value field just drag and drop the prompt created above.
Prompt will be tagged to the filter and user will be prompted during execution. Depending on the input provided by the user top n rankers will be displayed

Question # 19

How to use consolidations in microstrategy report?

Answer:-

Consolidations :

Consolidations are used to Specify the data you want to view in your report, and it allows you to group attribute elements in New ways without changing the metadata and warehouse definitions.

Use:

When the client want to view profit values as per season wise for a particular region, in this situation season attribute not available in data so we can create the season consolidation as SEASON = {(SUMMER = FEB+MAR+APR+MAY)+ (SPRING = JUNE+JULY+AUGUST+SEPTEMBER) + (WINTER = OCTOBER+NOVEMBER+DECEMBER+JAN) };

The above consolidation we can insert into report then it will displays the season wise profit values.....

Question # 20

In document how to create metrics?

Answer:-

we can create only derived metrics in document by click insert-> new metric

[Read More Answers.](#)

Question # 21

Difference between standard, absolute and ignore condition in metrics?

Answer:-

Standard filtering allows the report filter to affect the metric.

Absolute filtering raises the report filter to the level of the target, so all subcategories in the categories included on the report are added together.

Ignore filtering disregards filtering criteria based on the attribute in the target and its related attributes (both parents and children).

[Read More Answers.](#)

Question # 22

What are the roles & responsibilities of microstrategy developer?

Answer:-

developer should know follow things:

- i) how to create public objects(metrics, filters...ect)
- ii) how to create shema objects(attributes, facts)
- iii) how to trouble shoot reports/dashboards

Besides these if a candidate how to write and execute system test case is well and good :)

[Read More Answers.](#)

Question # 23

What is view filter?

Answer:-

Apply specific filter condition then after we can get the report data set. it is olap. view filter main use viewing purpose for custmoers.
