# New Product Planning Integration Job Interview Preparation Guide.

### Question # 1

Explain What is Black-box Testing?

#### Answer:-

Black-box testing is a method of software testing that tests the functionality of an application as opposed to its internal structures or workings. This method of test can be applied to all levels of software testing: unit, integration, system and acceptance. It typically comprises most if not all testing at higher levels, but can also dominate unit testing as well.

### Question # 2

Explain What is White-box testing?

#### Answer:-

White-box testing is a method of testing software that tests internal structures or workings of an application, as opposed to its functionality. In white-box testing an internal perspective of the system, as well as programming skills, are used to design test cases. The tester chooses inputs to exercise paths through the code and determine the appropriate outputs. This is analogous to testing nodes in a circuit, e.g. in-circuit testing (ICT).

### Question # 4

What is Non-functional testing?

#### Answer:-

Non-functional testing is the testing of a software application for its non-functional requirements. The names of many non-functional tests are often used interchangeably because of the overlap in scope between various non-functional requirements. For example, software performance is a broad term that includes many specific requirements like reliability and scalability.
