Question # 2

What is back order in OM?

Answer:-

There are few reasons that a scheduled order could be
backordered during pick release process.
1. In-sufficient onhand
2. Order might be put as 'Pick release hold'
3. If it's a lot controlled item being involved then some
of the factors will be checking at picking rule setup (like
Lot- expiration date, etc) and tured to 'Backordered'
incase the criteria does not meet.

Question # 3

Tell me where we find the status of order information?

Answer:-

Order header status is in oe_order_headers_all table
reference with flow_status_code column and order line
status would be oe_order_lines_all table reference with
flow_status_code column.

Question # 4

What is the difference between request group and request security group in oracle apps?

Answer:-

Request group is where the concurrent programs are attached
to which internally make them available under a
responsibility that the request group is attached to. If
request groups won't be there the program will not be
visible to the user who has a responsibilty attahced.
Data group is nothing but the data base user details with
oracle apps connects UI to DB

Question # 5

Tell me how to find the custom directory in front end?

Answer:-

From Application Developer responsibility, navigate to
Application --> Register. Query for the custom application
name. The value in the field Basepath, is the OS system
variable that stores the actual directory info.

Question # 6

i have 3 parameters like p1,p2,p3. In p1 i have 2 parameters like a,b.if pass parameter a p2 should be enable and p3 should be disable then if pass parameter b the vice versa?

Answer:-

you can create two more dummy parameters(like
p2_dummy,p3_dummmy) and set display property to no.
now set the default value for p2_dummy as "decode
(p1,'a','Y',null) in the same way for p3_dummmy.
now in the valueset for p2 use where $FLEX$.p2_dummy ='Y'
and similarly for p3.

Question # 10

What is count(*) from po_vendors(any table)? What does it do and
What is count(1) from po_vendors(any table)?
What is count(0) from po_vendors(any table)
the out put is same what is the difference?

Answer:-

Result if count(*), count(1), count(0) will be same.
Howevenr,
When we use count(*) then
first oracle query executer gets all the rows in buffure
cache, including all column and then counts all the rows.
this will impact with less performance.
select count(1) or count(0)
This reduces unwanted I/O by selecting just '1' against all
the rows.
Best practice to getting rowcount of table is
select count(rowid) from table_name;

Question # 11

Explain what are the tables of auto invoice?

Answer:-

RA_INTERFACE_LINES_ALL ,
RA_INTERFACE_DISTRIBUTIONS_ALL ARE THE TWO INTERFACE TABLES
MAINLY USED BT AUTOINVOICE.
FURTHER DATA READ FROM THESE TABLES WILL BE INSERTED INTO
RA_CUSTOMER_TRX_ALL , TA_CUSTOMER_TRX_LINES_ALL ,
RA_CUST_TRX_LINE_GL_DIST_ALL , AR_PAYMENT_SCHEDULES_ALL
AFTER VALIDATING.

Question # 12

Suppose for report i have to parameters those are from_date and to_date, so to_date should be greater when compare to from_date, if we are giving to_date is less then it must shows some error how we will make?

Answer:-

while defining Parameters you can set range option(in
concurrent prog parameters window).
Select low for from_Date and high for to_Date.Then it will
not allow for from_date > to_date.

Question # 14

Do you know is it possible to run the interface without using oracle apps?

Answer:-

The Oracle standard interface code stays in the oracle apps
database in the form of PL/SQL routines. Without the
database up and running, we can not run the interface code.
After all why do we run the interface, when the oracle apps
is not available.
