Question # 11

What is ossification?

Answer:-

Ossification in bone remodeling is the process of laying down new bone material by cells called osteoblasts. It is synonymous with bone tissue formation. There are two processes resulting in the formation of normal, healthy bone tissue: Intramembranous ossification is the direct laying down of bone into the primitive connective tissue, while endochondral ossification involves cartilage as a precursor. In fracture healing, endochondral osteogenesis is the most commonly occurring process, for example in fractures of long bones treated by plaster of Paris, whereas fractures treated by open reduction and internal fixation with metal plates, screws, pins, rods and nails may heal by intramembranous osteogenesis.

Question # 20

What is facet?

Answer:-

smooth, nearly flat articular surface

[Read More Answers.](#)

Question # 21

What is condyle?

Answer:-

rounded prominence; usually found at the site of articulation with another structure

[Read More Answers.](#)

Question # 22

What is epiphysis?

Answer:-

end of long bone; secondary site of ossification

[Read More Answers.](#)

Question # 23

What are Methods of Osteology?

Answer:-

A typical analysis will include:

- * an inventory of the skeletal elements present
- * a dental inventory
- * aging data, based upon epiphyseal fusion and dental eruption (for subadults) and deterioration of the pubic symphysis or sternal end of ribs (for adults)
- * stature and other metric data
- * ancestry
- * non-metric traits
- * pathology and/or cultural modifications

Question # 24

What is social anthropology?

Answer:-

Social anthropology or anthroposociology is the dominant constituent of anthropology throughout the United Kingdom and Commonwealth and much of Europe, where it is distinguished from cultural anthropology. In the USA, social anthropology is commonly subsumed within cultural anthropology.

[Read More Answers.](#)

Question # 25

What is anatomy?

Answer:-

Anatomy is the branch of biology concerned with the study of the structure of organisms and their parts. Anatomy is inherently tied to embryology, comparative anatomy, evolutionary biology, and phylogeny, as these are the processes by which anatomy is generated over immediate (embryology) and long (evolution) timescales. Human anatomy is one of the basic essential sciences of medicine.

[Read More Answers.](#)

Question # 26

What is metaphysis?

Answer:-

growth plate; epiphyseal plate

[Read More Answers.](#)

Question # 27

What is archaeology?

Answer:-

Archaeology, or archeology, is the study of human activity through the recovery and analysis of material culture. The archaeological record consists of artifacts, architecture, biofacts or ecofacts, and cultural landscapes. Archaeology can be considered both a social science and a branch of the humanities. In North America, archaeology is considered a sub-field of anthropology, while in Europe archaeology is often viewed as either a discipline in its own right or a sub-field of other disciplines.

[Read More Answers.](#)

Question # 28

Explain me who studies the bones?

Answer:-

Scientists who study dinosaur bones (or fossils) are called paleontologists. Paleontologists have a lot in common with archaeologists - both excavate and study animal bones. Archaeologists who specialize in animal bones study zooarchaeology, which means "the archaeology of animals".
