Question # 3

Which terminology used in MPMM?

Answer:-

MPMM has adopted best practice terminology to ensure that organizations communicate effectively whilst managing projects. Within the Glossary you will find definitions for all commonly used terms within MPMM.

Q Is it best practice?

A Yes. To ensure that MPMM is considered best practice within the industry, we have aligned the contents as closely as possible with the two defining project management industry standards: the PMBOK™ (the US standard) and Prince2™ (the UK standard). See the Best Practices page for more information.

Question # 5

How you tell the team about his past work performance in MPMM?

Answer:-

It should be an open discussion with each team member and this discussion should start with positive points only and all the negative points should be discussed personally (privately).

[Read More Answers.](#)

Question # 6

Define MPMM?

Answer:-

MPMM is a Project Management Methodology which provides a complete "framework" for managing projects. This framework provides you with a step-by-step walkthrough of the phases, activities and tasks to be undertaken to complete a project. By following the Project Life Cycle framework for your project, you will greatly enhance your chances of project success.

Question # 7

What types of projects are suitable?

Answer:-

MPMM is unique in that the Project Life Cycle, templates and examples apply to all project types, sizes and industries. The core principles within MPMM are currently used by more than 45,000 people in 50 different countries around the world, to undertake projects successfully. Some of the more common industries include IT, Building and Construction, Telecommunications, Engineering and Government to name a few. By reading the Examples, you will see examples of the wide variety of project types suitable for MPMM. Of course, you need to scale this methodology to fit each current project.

Question # 9

What was the most stressful aspect of your last project and how did you deal with it?

Answer:-

Very few projects stay on schedule, under budget and with no major problems. The ability to handle stressful situations is key to successful project management. Limited resources and time, changing demands and new circumstances all result in stress on the project manager. Show how you are able to stay calm under pressure and plan to reduce stress focusing on aspects such as your people management, technology management, risk management and expectation management.

Question # 10

What motivates you better on projects?

Answer:-

A little appreciation for a successfully completed work. If failed in that task, I am motivated to do it better than ever. If completed successfully, the success motivates me to go in for a tougher project/work which is a new challenge for me. As it is, winning challenges is the spirit in me.

1. When I am able to make significant positive contribution in a challenging situation, thereby helping in the overall success of the Task / Project.
2. When organization shows confidence in me by choosing me amongst many for a tough and challenging assignment.

Question # 12

How to handle stress as a Project Manager?

Answer:-

I'm not the type of person that becomes stressed very easily. However, if in an extreme circumstance I did start to become stressed, I would look to the cause of it and attempt to identify a solution. I would certainly not be afraid to look to others for their input and assistance. In a working environment I think stress comes around from pressurized situations. In such cases the best solution is often one of situation management until the crisis abates.

I hardly ever get stressed; however, I do encounter different kinds of challenges. The recipe for me to overcome those challenges is to get to the bottom of the problem and deal with it immediately before it becomes a disaster.

Question # 17

Please suggest me some good concepts that can be taken as a project of around a week or so in java/j2ee/VC++.
I consider myself very good in theory/concepts but i would love to have some practical experience also. So if anyone can help me out or rather suggest me some good project idea to implement, i will be thankful to him/her?

Answer:-

First u have to choose the project defination on the basis of your knowledge then analyse your project defination and after that u can make project design. Then your implementation will start. For that u must have some technical knowledge on the programming languages and technical funda. After complete your project u have to test your project on the basis of the errors.

Question # 18

I want to do a project in C . I want a good new project for my campus selection?

Answer:-

Here's what I suggest on what you need to do.

- 1.) Research on what your school needs to improve.
- 2.) Then research on your library, the internet, or preferably other schools on the related projects.
- 3.) Afterwards plan your project, this will really have a time for this will depend the outcome of your project.
- 4.) Act your plan. T

his is where your encoding and software testing will be done. For specific example:

- 1.) Library Database System
- 2.) Go to other schools for what they have done on their projects regarding Library Database System.
- 3.) Design your project and ask from the librarian what the library needs.
- 4.) Encode and test the program that you have created. This is just an example, your school might have other things that needs to have a system. Or you can always check the previous that other students have done but not been implemented in your school yet.

Question # 20

I am an MCA final year student. & in my next semester (3-2) i have to develop a project. I have decided to do project on INTRANET system on my collage. so please suggest me to choose a particular field . i have lots of options like (c,c++ using windows or Unix), D2k as front end & oracle database as back end, using java. But i want my project that must be helpful when i go for a job. And my main concentration & field of interest is Database?

Answer:-

You could go with the choice of oracle database as backend, using java for this project. Why not you try some comapnies whether they have vacancy for doing projects. Because this could give you real time work experience. This project is also good but first make a try with companies and then go for this choice. All the best.

Question # 21

I would like to do a mini project. But I am unable to select a field first of all. So please suggest me an easier field and a topic under which mini projects can be done and the corresponding references for that mini projects?

Answer:-

First of all minin projects are done to increase your knowledge, and go depth in the subject. So, select yhe field of your interest rather than select easier field, as it increases your enthusiasm and motivates you.

Go to google and search for mini projects on the topic of your wish, you will get the explanation, block diagram and flow chart.

Question # 22

I have to make project in our last semester and i am confused about it please guide me and the site that I should look into for information?

Answer:-

Do not panic, every final year B.E/B.Tech/M.Tech/MCA students need to do projects in their final year. so, do not think project as a burden but think its a place where you can learn more about the subject, different fields apart from curriculum.

There are many institutes to assist you, you can approach them, they will have many projects, collect the synopsis from them and choose the project of your institute.
