Question # 2

Tell us what are the different SAP products?

Answer:-

SAP R/3 - It succeeds SAP R/2 and is market leader in ERP. R/3 stands for three tier architecture i.e. Presentation, Logic and Data tier. It has many modules like SD, FI, and HR etc which encompass almost all enterprise departments.

My SAP - It is a suite of SAP products which apart from SAP R/3 also includes SRM, PLM, CRM, SCM

[Read More Answers.](#)

Question # 3

Explain me how many SAP Sessions can you work on at a given time?

Answer:-

At any given time for a particular client, you can work on 6 sessions at max.

[Read More Answers.](#)

Question # 4

Explain me what is the difference between OLAP and Data Mining?

Answer:-

- * OLAP: OLAP stands for Online Analytical Processing it is a reporting tool configured to understand your database schema, dimensions and composition facts
- * Data Mining: It is an analytic process to explore data in search of consistent patterns or systematic relationship between variables.

[Read More Answers.](#)

Question # 5

Explain me what is the importance of ODS in BIW?

Answer:-

An ODS object serves to store debugged and consolidated transaction data on a document level. It defines a consolidated dataset from one or more info-sources. This data-set can be evaluated with a Bex query or Infocube query. The data of an ODS object can be updated with a delta update into InfoCubes or other ODS object in the same system or across systems. In contrast to multi-dimensional data storage with InfoCubes, the data in ODS object is stored in transparent, flat database tables.

[Read More Answers.](#)

Question # 6

Tell us what are the standard stages of the SAP Payment Run?

Answer:-

While executing the SAP Payment Run the standard stages of SAP includes

- * Entering of parameters: It includes entering company codes, vendor accounts, payment methods, etc.
- * Proposal Scheduling: The system proposes list of invoices to be paid

- * Payment booking: Booking of the actual payments into the ledger
- * Printing of Payment forms: Printing of payment forms

[Read More Answers.](#)

Question # 7

[Read More Answers.](#)

Question # 11

Explain me what is ERP?

Answer:-

ERP stands for "enterprise resource planning". The definition of enterprise resource planning is an integrated software solution used to manage a company's resources. ERP systems integrate all business management functions, including planning, inventory/materials management, engineering, order processing, manufacturing, purchasing, accounting and finance, human resources, and more.

[Read More Answers.](#)

Question # 12

Tell me have you developed custom transaction software?

Answer:-

Tell me about this." Well-designed and well-implemented ERP systems help management keep track of the tiniest pieces of inventory. Custom transaction software enables employees to make real-time inventory changes. While this concept seems geared toward manufacturing, it's applicable to any business that offers something for sale. For instance, it would also be appropriate for a retail store, food-service operation or a government facility.

[Read More Answers.](#)

Question # 13

Do you know what is Net Weaver?

Answer:-

Net weaver is an integrated technology platform such that all the products in the SAP suite can run on a single instance of net weaver known as SAP Web Application Server (SAP WEBAS).

The advantage of using Net weaver is you can access SAP data using the web (http protocol) or even mobile. Thus you can save on costs involved in training users on SAP Client side GUI.

[Read More Answers.](#)

Answer:-

To view transaction table TSTC you can use transaction code st11, and you can define a new t-code using transaction se93.

[Read More Answers.](#)

Question # 24

Explain me what is BDC stand for? How many methods of BDC are there?

Answer:-

BDC stand for Batch Data Communication. The methods of BDC are

- * 1. Direct Input Method
- * 2. Batch Input Session Method
- * 3. Call transaction Method

[Read More Answers.](#)

Question # 25

Explain me what is the difference between the "residual payment" and "partial payment" methods of allocating cash in account receivable?

Answer:-

The difference between the residual and partial payment includes

- * Partial payment: For example, let say invoice A456 exits for \$100 and customer pay \$70. With the partial payment, it offsets the invoice leaving a remaining balance \$30
- * Residual Payment: While in residual payment, invoice A456 is cleared for the full value \$100 and a new invoice line item is produced for the remaining balance of \$30.

[Read More Answers.](#)

Question # 26

Explain me what is pooled tables?

Answer:-

Pooled tables are used to store control data. Several pooled tables can be united to form a table pool. Table pool is a physical table on the database in which all the records of the allocated pooled tables are stored.

[Read More Answers.](#)

Question # 27

Do you know why implement an ERP system?

Answer:-

ERP software integrates all departments and functions across a company onto a single computer system that can serve all those different departments' particular needs. ERP combines finance, HR, manufacturing and distribution all together into a single, integrated software program that runs off a single database so that the various departments can more easily share information and communicate with each other. This integrated approach can have a tremendous payback provided the software is installed and used correctly.

[Read More Answers.](#)

Question # 28

Do you know what are the different types of ERP's?

Answer:-

- * 1. SAP
- * 2. Baan
- * 3. JD Edwards (now acquired by Oracle)
- * 4. Siebel
- * 5. PeopleSoft (now acquired by Oracle)
- * 6. Microsoft Dynamics

[Read More Answers.](#)

Question # 29

Can you mention what are the different types of variables?

Answer:-

Variables are used in different application

- * 1. Characteristics variable
- * 2. Hierarchies
- * 3. Hierarchy nodes
- * 4. Text
- * 5. Formulas
- * 6. Processing Types
- * 7. Replacement Path
- * 8. User entry/default type

[Read More Answers.](#)

Question # 30

Tell me what is ALE, IDOC, EDI, RFC and explain briefly?

Answer:-

1. ALE: Application Linking enabling
2. IDOC: Intermediary documents
3. EDI: Electronic data interchange
4. RFC: Remote function call

[Read More Answers.](#)

Question # 31

Tell me the two types of services that are used to deal with communication?

Answer:-

To deal with communication, you can use two types of services

- * 1. Message Service: In order to exchange short internal messages, this service is used by the application servers
- * 2. Gateway Service: This service allows communication between R/3 and external applications using CPI-C protocol.

[Read More Answers.](#)

Question # 32

Tell us what is the protocol does SAP Gateway process use?

Answer:-

The SAP gateway process uses TCP/IP protocol to communicate with the clients.

[Read More Answers.](#)
