Question # 7

Do you ever take work home with you?

Answer:-

Here are two great sample answers that might help get you started:

* I am an extremely organized person, so I tend to be able to get my work done at work. However, if the need arose I would not be against taking work home. I try not to make it a habit, since I do value my free time. I do realize though that the work we do is important, and sometimes you have to do what needs to be done.

* I do not shy away from taking work home with me. I know that meeting deadlines and doing outstanding work sometimes means taking a bit of it home. I do not have a problem doing that when the need arises.

* Make sure to give an honest answer. Lying about taking work home may turn out badly for you if it is required and you do not do it.

You can turn the switches on and off as many times as you wish (they are all off to begin with), but may only enter the room once. There is no one there to help you. The door to the room is closed, and there are no windows, so you cannot see inside. How can you discover which switch operates the bulb?

Answer:-

Do the following steps:

* 1. Turn ON two switches, and leave one OFF.

* 2. Wait a few minutes.

* 3. Turn one switch from ON to OFF. One is now ON and two are OFF

* 4. Enter the room. - If the light is ON, it is controlled by the switch you left ON. - If the light bulb is OFF, touch it. If it is warm it is controlled by the switch you turned ON and OFF. If it is cold, it is controlled by the switch you never turned on.

Question # 42

How many square feet of pizza are eaten in the United States each month?

Answer:-

This is a classic guesstimate question where you need to think aloud. And so first off you round the U.S. population to 300 million people (it's actually about 315 million but rounding will be much easier and your interviewer will not score you lower for rounding). Then estimate how many people eat pizza. A decent educated guess is two out of every three people, or 200 million. Now let's say the average pizza-eating person eats pizza twice a month, and eats two slices at a time. That's four slices a month. If the average slice of pizza is perhaps six inches at the base and 10 inches long, then the slice is 30 square inches of pizza. So, four pizza slices would be 120 square inches (30 times 4).

Since one square foot equals 144 square inches (12 times 12), let's assume that each person who eats pizza eats one square foot per month. Since there are 200 million pizza-eating Americans, 200 million square feet of pizza are consumed in the U.S. each month. To summarize: 300 million people in America, 200 million eat pizza, average slice of pizza is six inches at the base and 10 inches long or 30 square inches, average American eats four slices of pizza a month, four pieces times 30 square inches equals 120 square inches (one square foot is 144 square inches), so let's assume one square foot per person, and thus one square foot times 200 million people equals 200 million square feet of pizza a month.
