Question # 9

How to check your typography?

Answer:-

Below are some simple guidelines for studying your typography and making sure it's appropriate for your project at hand.

* Choose your typeface carefully, paying attention to the font family and whether it makes sense in this context.

* Set up your design using placeholder text, but don't sign off on the final design until you've seen the real text in the design.

* Pay close attention to the little details of your typography, such as the rag of your text blocks. These small details can greatly affect readability.

* Look at each block of text as if it had no words in it. What shapes does the text make on the page? Make sure these shapes complement the larger page design.

Question # 23

What is geometric sans serif?

Answer:-

Simple geometric shapes influence the construction of these typefaces. Stacks have the appearance being. Strict monoelines and character shapes are made up of geometric forms. Geometric sans tend to be less reachable than grotesques.

[Read More Answers.](#)

Question # 24

Explain Transitional serifs serif-typefaces?

Answer:-

English printer and typography John Baskerville established this style in the mid 18th century. Weight contrast is more pronounced than in old style design. Serifs are still breasted and head serifs are oblique.

[Read More Answers.](#)

Question # 25

What is baseline in Typography?

Answer:-

The invisible line where letters sit

[Read More Answers.](#)

Question # 26

What is diagonal Stroke in Typography?

Answer:-

An angled stroke

[Read More Answers.](#)

Question # 27

What is grotesque Sans serif?

Answer:-

These are the first commercially popular sans serif typefaces. Stroke contrast is less pronounced than earlier designs, and much of the "squatness" in curved strokes has been rounded. Normally the most obvious distinguishing characteristic of these faces is this single bowl g and more monotone weight stress.

[Read More Answers.](#)

Question # 28

What is hyphenation?

Answer:-

The addition of a hyphen at the end of lines can help prevent legibility issues and make adjustments look better. We usually don't have to think about hyphenation, since it's handled automatically in word processors and web browsers.
