WSDL Job Interview Preparation Guide.

Question # 1

What is WSDL (Web Services Description Language)?

Answer:-

WSDL is stands for Web Services Description Language. Basically WSDL is fully based on XML. Main use of WSDL to describe the web services and also told how to use this web services. It is written on XML. Also WSDL has W3C Recommendation

Question # 2

Explain more about WSDL?

Answer:-

WSDL given us many element to describe its document. I have only given you four elements which are main elements to describing WSDL document.

These are:

1. <portType> is an important element to describe WSDL document. Using this element we can perform a task to compare a function library (like: class) in traditional programming language.
2. each <message> element has more than one parts. we can compare that parts.
3. using <types> we can define datatypes that are used in web services.
4. using <binding> for each port we can define the format of messages and details of protocol.

syntax:

<definitions>

<types>

To define type here

</types>

<message>

To define message here

</message>

<portType>

To define portType here

</portType>

<binding>

To define binding here

</binding>

</definitions>

Question # 3

What is SOAP, UDDI and WSDL?

Answer:-

SOAP (Simple Object Access Protocol) is a simple protocol for exchange of information. It is based on XML and consists of three parts: a SOAP envelope (describing what's in the message and how to process it); a set of encoding rules, and a convention for representing RPCs (Remote Procedure Calls) and responses.

UDDI (Universal Description, Discovery, and Integration) is a specification designed to allow businesses of all sizes to benefit in the new digital economy. There is a UDDI registry, which is open to everybody. Membership is free and members can enter details about themselves and the services they provide. Searches can be performed by company name, specific service, or types of service. This allows companies providing or needing web services to discover each other, define how they interact over the Internet and share such information in a truly global and standardized fashion.

WSDL Interview Questions And Answers

WSDL (Web Services Description Language) defines the XML grammar for describing services as collections of communication endpoints capable of exchanging messages. Companies can publish WSDLs for services they provide and others can access those services using the information in the WSDL. Links to WSDLs are usually offered in a company's profile in the UDDI registry.

Question # 4

Can you define basic element of WebServices and explain any one from them?

Answer:-

These are as follows SOAP, WSDL and UDDI. And I am explaining about the SOAP(Simple Object Access Protocol) it is a communication protocol it is for communication between application it is platform and language independent. It is based on XML and also help to get from Firewall.

Question # 5

Is it possible to generate the source code for an ASP.NET Web service from a WSDL?

Answer:-

The Wsdl.exe tool (.NET Framework SDK) can be used to generate source code for an ASP.NET web service with its WSDL link.

[Read More Answers.](#)

Question # 6

What is web service?

Answer:-

We can assume a web service as a method over the web. It actually takes the parameter and gives the result in the XML format for independability. Furthermore, it uses SOAP formatted XML envelopes and uses WSDL for interfacing.

Question # 7

What does WSDL stand for?

Answer:-

WSDL stands for Web Services Description Language. It is an XML representation of the web service interface.

There are two types of the operations specified in the WSDL file as represented by the <soap:binding> attribute of the file.

1. Document oriented operations -- are the ones which contain XML documents as input and output
2. Result oriented operations -- are the ones which contain input parameters as the input message and result as the output message

Question # 8

How do you define Binding in WSDL?

Answer:-

Basically we use binding in WSDL to define format of messages and detailed information about protocol of web services.

I have given you binding consists of two attributes.

These are name attribute and type attribute (name is used to define binding name where as type is used to define binding port).

In case of SOAP binding it has two attributes. These are style and transport attribute.

Example:

```
<message name="getTermRequest">
<part name="term" type="xs:string"/>
</message>
<message name="getTermResponse">
<part name="value" type="xs:string"/>
</message>
<portType name="glossaryTerms">
<operation name="getTerm">
<input message="getTermRequest"/>
<output message="getTermResponse"/>
</operation>
</portType>
<binding type="glossaryTerms" name="b1">
<soap:binding style="document"
transport="http://xyzsoap.org/soap/http" />
<operation>
<soap:operation
soapAction="http://soapexample.com/getTerm"/>
<input>
<soap:body use="literal"/>
</input>
<output>
<soap:body use="literal"/>
</output>
</operation>
```

</binding>

Question # 9

What do we need to deploy a web service?

Answer:-

At the command prompt:

WSDL http://ip address of the site/WebService/MathService.asmx /n:NameSp /out:FileName.cs]

-This will create a file called FileName.cs .

WSDL -> WebServices Description Language (This is an application available at C:\Program Files\Microsoft.NET\FrameworkSDK\Bin)

NameSp -> Name of the Namespace which will be used in client code for deploying the webservice.

2.Compilation

CSC /t:library /r:system.web.dll /r:system.xml.dll CreatedFile.cs

This will create a dll with the name of the public class of the asmx file.(In our case, it is AddNumbers.dll)

CSC is an application available at C:\WINNT\Microsoft.NET\Framework\v1.0.2914

3.Put the dll file inside WWWRoot\BIN [Create a BIN Folder in WWWRoot]

Question # 10

What is the meaning of semantic annotations?

Answer:-

A semantic annotation is additional information in a document that defines the semantics of a part of that document. In this technical note, the semantic annotations are additional information elements in a WSDL document. They define semantics by referring to a part of a semantic model that describes the semantics of the part of the document being annotated.

The WSDL document forms the anchor point for Web services description. Building on the descriptive capability of WSDL, a mechanism is provided to annotate the capabilities and requirements of Web services with semantic concepts referenced from a semantic model. To do this, mechanisms are provided to annotate the service and its inputs, outputs and operations. Additionally, we provide mechanisms to specify and annotate preconditions and effects of Web Services. These preconditions and effects together with the semantic annotations of inputs and outputs can enable automation of the process of service discovery.

Question # 11

How do I get started with a Web Services?

Answer:-

The easiest way to get started with Web services is to learn XML-RPC. Check out the XML-RPC specification or read my book, Web Services Essentials. O'Reilly has also recently released a book on Programming Web Services with XML-RPC by Simon St.Laurent, Joe Johnston, and Edd Dumbill.

Once you have learned the basics of XML-RPC, move onto SOAP, WSDL, and UDDI. These topics are also covered in Web Services Essentials. For a comprehensive treatment of SOAP, check out O'Reilly's Programming Web Services with SOAP, by Doug Tidwell, James Snell, and Pavel Kulchenko.

About Global Guideline.

Global Guideline is a platform to develop your own skills with thousands of job interview questions and web tutorials for fresher's and experienced candidates. These interview questions and web tutorials will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts. Global Guideline invite you to unlock your potentials with thousands of [Interview Questions with Answers](#) and much more. Learn the most common technologies at Global Guideline. We will help you to explore the resources of the World Wide Web and develop your own skills from the basics to the advanced. Here you will learn anything quite easily and you will really enjoy while learning. Global Guideline will help you to become a professional and Expert, well prepared for the future.
