Question # 27

You are using sysprep to prepare a system for imaging. You want to enable end users to customize their Windows operating system, create user accounts, name the computer, and other tasks. Which sysprep setting should you use?

- A) /audit
- B) /unattend
- C) /generalize
- D) /oobe

Answer:-

/oobe

Reason:

oobe will restart the computer into Windows Welcome mode

[Read More Answers.](#)

Question # 28

You are using sysprep to prepare a system for imaging. You want to reset the security ID (SID) and clear the event logs. Which option should you use?

- A) /oobe
- B) /unattend
- C) /audit
- D) /generalize

Answer:-

/generalize.

Reason:

Generalize prepares the Windows installation to be imaged. If this option is specified, all unique system information is removed from the Windows installation. The security ID (SID) resets, any system restore points are cleared, and event logs are deleted. The next time the computer starts, the specialize configuration pass runs. A new security ID (SID) is created, and the clock for Windows activation resets, if the clock has not already been reset three times.

Question # 37

What is better Windows 7 upgrade or full retail version? Does the upgrade contain all the features of full version?

Answer:-

This is the most discussed question on most forums. Well, the price is a huge difference between the upgrade and full version. Windows 7 upgrade is meant for those running Windows XP or Vista. In case, you are going for new system you could get the OEM version from the supplier cheaply. Clearly with the upgrade you get all the Windows 7 features. Then who would go for the full version. People running the age old Windows 98, or 95 need to buy the full version. Even those who want Windows 7 on a Mac computer using Boot Camp, or who are running Linux should go for it. The upgrade and the full discs are same.

Question # 39

What is the difference between the Upgrade and Custom installation options?

Answer:-

There's a huge confusion over the term Upgrade for Windows 7. The term is used to describe the price variant as well as the term used in the installation process. Now if you buy the Windows Upgrade, you will get the Upgrade and Custom options during the installation. The Upgrade version can only be opted if you are already running Vista.

Choosing the Upgrade option carries your applications, documents, settings and user accounts over to the new OS. In case you are not coming from Vista, go for the Custom option which would ensure fresh installation. For the XP user who wants to migrate instead of wiping everything out and reinstalling, you can use Laplink's PCmover to get the same result as doing an Upgrade installation.

Remember even after custom installation your old files will be preserved in a folder named Windows.old.

Question # 40

How do I get my files and folders after upgrading from Windows XP or Windows Vista?

Answer:-

This will overtly depend on how you upgraded your system. If you upgrade from Windows Vista they would be in the same location in which you had stored them.

For a custom upgrade from XP without reformatting the old files will be stored in a folder called Windows.old. To retrieve the files follow the steps below

1: Open the drive where you have installed Windows (usually, the C: drive)

2: Double-click the Windows.old folder

3: Double-click the Users folder

4: Double-click your user name

5: Open the folders that contain the files you want to retrieve. For instance, to retrieve files in the Documents folder, double-click Documents

6: Copy and paste the files that you want from each folder to a folder in Windows 7

For each user account repeat the steps 4 and 6

In case you reformatted your drive or partition the files cannot be recovered.

Question # 47

What can I do with a system with the minimum hardware recommendations?

Answer:-

The recommended hardware setup for Windows 7 is meant for average computing tasks, such as web browsing and word processing. If you plan to play graphically-intensive games or run other hardware-intensive programs, you will need more robust hardware. It will probably be possible to run Windows 7 on a less powerful system than the minimums recommend, but results cannot be guaranteed.
